

Individual Reflection

André Kejovaara

Week 2

What can I do to learn or understand better?

There is much room for improvements and new things to learn in this course. My main focus will be how to work well with Agile software development, to learn and understand the routines and how to work well as a team. Get into Scrum was more in focus for week 2, also understanding how User stories, epics and themes work.

How can I help someone else, or the entire team, to learn something new?

By trying to recognize that people have different skill sets and experiences and by understanding those, it can enable you to help your team in an efficient manner when problems would arise.

What is my contribution towards the team's use of Scrum?

I've attended lectures, we've had a couple of meetings together. This lets me be active in discussions in the team. We've discussed the different roles of a scrum team and how to use them in our team.

What is my contribution towards the team's deliveries?

I've been active in discussions we've had during the week. I've set up a discord for us to use. I've also provided a meeting protocol that we will be using throughout the course. We have as a team contributed fairly equal to the business model through discussion, as well as the project scope.
