

- What do I want to learn or understand better?

I've gotten more used to working with a larger group and am quite enjoying it. This is partly because I've gotten to know my group members better but also because me and my group are more used to working with Scrum. Having said that, I still believe that there's a lot I can improve on and have yet to learn regarding Scrum. The more familiar I get working with Scrum, the more value I can provide to the stakeholder as well as my group members and myself. A few members in my group have a lot of experience working with html, which I don't. I would like to learn how to write html code and in order to do so I'm going to challenge myself and try picking an user story that features some sort of html usage next sprint so that I can practice.

- How can I help someone else, or the entire team, to learn something new?

For this sprint the user story that I and another group member were assigned to had aspects related to an user story I worked with last sprint. There were some instances this sprint where I was able to help my group member understand certain parts of the code which then led to us being able to more efficiently work together this sprint. Aside from helping him, he helped me understand maven and how to set it up, which eventually led me to being able to help another group member that had the same problem as I. In the future, as me and my group members are all working in different areas of the code for different user stories, more opportunities where I can explain and teach my group members about various things.

- What is my contribution towards the team's use of Scrum?

My contribution this sprint was attending all the group meetings and staying active in the discussions and sprint planning/review. It might sound like a given, but I think attending as many meetings as possible and staying active within the group is a huge key to making the team's use of Scrum as good as possible, especially if all other members do the same. I'm not sure what exactly I can do differently to increase my contribution to the team's scrum usage as I already think my contribution is good, but if I had to think of something, then maybe try helping the Scrum master get the discussion back on track faster when it starts derailing.

- What is my contribution towards the team's deliveries?

This week I worked on the user story "As an user I would like to select provider so that I can view their products" together with Rasmus. We made it so that it was possible to efficiently select an existing provider from the webpage which would then redirect the user to a new page containing all of that provider's products. I really enjoyed working with this user story as I got to learn a lot about html and then implement it accordingly together with Rasmus. In my previous individual reflection I wrote that me and my group member underestimated our user story which led us into having to work overtime. This sprint however went way better and we managed to get our work done before the deadline, this was thanks to us placing a more educated effort estimation before starting our sprint.
