

- What do I want to learn or understand better?

We have now started with creating a local server for the project, just a simple step towards really starting to make progress. I think this is great, the whole team has set up the development environment and it has taught me a little bit more about the scrum workflow because we set up some starting user stories for the team, but there is still a lot to learn about it I think, so that point is still on top of the learning list.

- How can I help someone else, or the entire team, to learn something new?

This week I noticed how much I can help the team with stuff they might not know. Specifically this week was just some standard setup and IDE things, but it still makes you realise the importance of different experiences. In the future I hope to help with more effective coding stuff, which I think I have some good experience with, but we will see.

- What is my contribution towards the team's use of Scrum?

I was very involved with making user stories and I feel like I contribute mainly with trying to be effective and to the point. This is something I want to continue with so that we do not waste time and energy on something unnecessary.

- What is my contribution towards the team's deliveries?

This week one other team member did a little bit of coding, but I was mostly involved with helping everyone get their environments to work. In the future I want to contribute more with coding, but still not forget about everything else.
